WHAT IS JCB REMAN?

JCB Reman enables you to buy remanufactured JCB components with 'as new' warranty, at a fraction of the cost of buying new.

Each JCB remanufactured component is remanufactured to the highest of standards, delivering both quality and assurance.

The Reman process is straight forward. Purchase a JCB Reman component (including core deposit) and if your old component (core) is suitable, you will receive the core deposit back by the credit process.

Your old core is then carefully disassembled, inspected, and rebuilt to Original Equipment Manufacturer specifications using genuine OEM parts. Once completed, tested and with JCB quality assured, the JCB Reman component is now available to any customer.

By using this service, you'll also be helping to make our industry more sustainable, as remanufacturing reduces the need for raw materials, waste, and energy.

Combining availability, quality and value for money, JCB Reman is the smart choice.

Did you know...

With JCB Reman you can save up to, on average

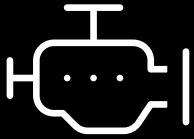

30%

Compared to buying new components!

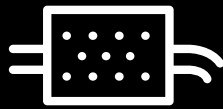

This logo identifies JCB Reman products. You can be assured that all products with this logo have been thoroughly tested and built to the highest quality.

WHICH COMPONENTS ARE AVAILABLE FROM JCB REMAN?

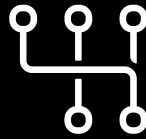

Engines

We offer a range of top engine brands through our JCB Reman Programme, including our own JCB Dieselmex range of engines, Perkins, Cummins, and Isuzu. They are all remanufactured to OEM specifications, using genuine parts.

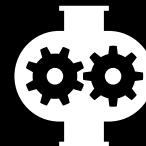

Replacement DPF

All the Diesel Particulate Filters (DPFs) available from our Reman Programme are cleaned using next generation cleaning technology, so filters will be in 'as new' condition.

Transmissions

Our remanufactured transmission range has been manufactured to the latest specifications. The range covers our own JCB Transmissions alongside other top brands such as ZF and AGCO.

Hydraulic Pumps

Remanufactured hydraulic pumps undergo a high-pressure rotating wash to ensure they're completely free of contaminants. Then, each pump is rebuilt in line with OEM specifications.

Fuel Injection Equipment

Our remanufactured fuel injection equipment, are 100% bench-tested before they leave the remanufacturer, to ensure the highest quality and reliability.

WHAT ARE THE BENEFITS OF JCB REMAN?

Quality

The process is OEM-approved, using genuine parts and trusted suppliers, so you can be sure of the quality.

Cost Savings

You can save up to on average 30% compared to buying new components, and lower the overall cost of ownership.

Reduced Downtime

You won't have to wait for new components to come back into stock, and the 'as new' warranty will mean you are less likely to have unexpected breakdowns.

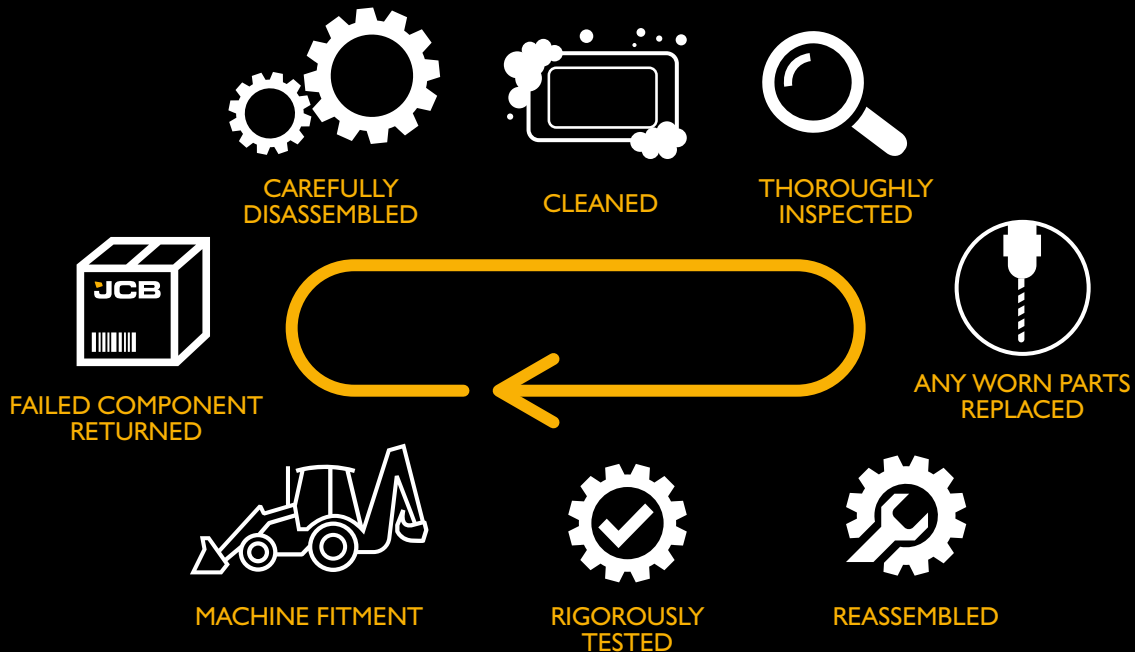

Sustainability

Remanufacturing saves the use of raw materials and energy, contributing to a reduction in your CO₂ footprint. Components which can't be remanufactured are recycled reducing waste.

HOW IT WORKS

The Remanufacturing Process

- ▶ Our tried-and-tested Reman process involves a full disassembly into individual component parts, followed by our advanced cleaning methods. Then, the component parts are fully restored, before the part is reassembled to OEM standards.
- ▶ We use state-of-the-art equipment throughout the process, and we only use remanufactured and genuine JCB new parts. This means all parts can be sold complete, with an 'as new' warranty – giving you total confidence in its performance.
- ▶ Remanufactured parts use the latest specifications meaning that you will have better functionality and performance than when originally new.

HOW DOES THE CREDIT PROCESS WORK?

The credit process is simple.

Once the inspection is complete and the component is suitable to go through the reman process, a credit is issued to the dealer and then issued back to you, the customer.
